Membuat website adalah suatu hal yang sudah biasa di masa sekarang ini. Setelah kita membuat website, supaya bisa diakses dari internet, maka kita harus mempublishnya/meletakkan di server Hosting. Atau istilahnya kita meminjam tempat /space pada hardisk yang berada di computer server milik penyedia layanan Web Hosting. Sudah banyak sekali tempat yang menyediakan layanan ini. Yang namanya pinjam, ya tentunya atau biasanya kita harus membayar, kecuali kalo minjem sama temen baru boleh ga bayar, itu juga ga semua temen kayaknya ⁽ⁱ⁾. Apalagi di jaman seperti sekarang ini yang segalanya diukur dengan uang. Akan tetapi dari sekian banyak penyedia layanan hosting yang sudah menjamur, baik di luar maupun dalam negeri, ada juga yang mau berbaik hati sama kita dengan menyediakan layanan secara gratis. Salah satunya adalah http://www.100webspace.com.

Sebetulnya ada banyak web hosting yang gratisan, tapi biasanya ga mendukung php sama mysql. Yah masa hari gini ga pake PHP – MySQL, ya kurang keren lah.... [©] Saya kira udah banyak yang tahu tentang Hosting Gratisan yang mendukung PHP sama MySQL, tapi barangkali ada yang belum tahu, ya moga aja bermanfaat. Bagi yang udah tau ... ya maaf..... Tulisan ini untuk adik2ku, temen2ku, sahabat2ku atau siapa aja lah yang membutuhkannya.

Pertama kita masuk dulu ke situs http://www.100webspace.com

Setelah masuk, kita daftar dulu. Kalo pingin yang gratis tentunya pilih yang Free Hosting. Klik Sign Up Now.

Alhamdulillah, akhirnya jadi juga.... Password accountnya sudah dikirim ke email kita yang kita tulis waktu daftar.

Kita buka dulu emailnya ya. Ooo ternyata ada....

Di sini terlihat ada password untuk akses Control Panel (lewat http/browser), ada juga yang untuk akses lewat FTP

Nah sekarang kita login menggunakan account yang udah kita buat.

Ini dia tampilan dari Control Panel milik 100 Web Space. Dengan Control Panel ini kita bisa memanage hosting kita,misalkan kita mau upload filenya. Atau bisa juga untuk mengatur FTP, domain, database, yang jelas macem2 lah.

Nah, kalo ini contoh file gambar yang udah berhasil diupload

Berikutnya, kita akan membuat database yang kita perlukan. Setelah kita berada di halaman home, klik icon gambar hardisk yang ada tulisannya MySQL Database.

Membuat database. Database yang kita buat mesti akan diawali dengan nama account kita, jadi kita harus menyesuaikan skrip yang udah kita buat dengan kondisi yang ada di hosting.

Klik nama database yang kita buat untuk mulai memanage database yang kita buat, missal menambah table, mengisi record, dsb. Kita akan dibawa ke halaman phpMyAdmin

phpMyAdmin	
Welcome to phpMyAdmin 2.6.4-pl2	
Language: English (en-iso-8859-1)	
Login	
(Cookies must be enabled past this point.)	
Username: [smklos_db	
Password:	
Login	

Klik login untuk masuk

Sekarang kita sudah siap untuk menambah tabel

Ikatlah limu dengan menuliskannya

Bisa juga mengeksport tabel2nya dari file teks. Tentukan nama file teks hasil backup dari database yang kita buat di komputer kita pada Location of the text file.

Alhamdulillah, akhirnya selesai juga prosesi upload yang kita lakukan. Dah bisa kan.... Sekarang website kita bisa diakses lewat internet deh... Tapi kita harus mengikhlaskan sedikit tempat untuk menampilkan iklan, ga papa ya.... ya namanya gratisan sih. Ya dah deh gapapa kalo gitu... Sebetulnya bisa kok diilangi. Tapi udah dulu ya... udah capek nih.....

Ya udah klo emang pingin tau cara ngilanginnya,tambahkan aja script

<noscript><body></noscript></body>

di setiap halaman yang kita buat.

Lha itu cuma dikit. Cuma ngasih tau gitu aja capek. Bilang aja kalo orangnya yang pelit .

Ya udah deh kalo gitu. Ya moga aja Allah menjadikanku orang yang ga pelit 😊

Biografi Penulis

Untung S.

Menyelesaikan studi di D3 Komputer dan Sistem Informasi UGM tahun 2004. Melanjutkan S1 di STMIK El Rahma Yogyakarta. Sekarang kegiatan sehari-harinya sebagai Asisten Laboratorium STMIK El Rahma, Programmer. Minat pada Pemrograman khususnya menggunakan Visual Basic,PHP dan Basis Data MySQL serta jaringan baik Windows maupun Linux
