Routing Protocol adalah aturan yang digunakan router untuk memperbaharui tabel routing. Contohnya adalah Routing Information Protocol (RIP). Routed Protocol adalah aturan yang digunakan untuk mengarahkan paket data yang dikirim. Contohnya Internet Protocol (IP). Routing Table adalah tabel yang dimiliki router yang berisi informasi mengenai jalur-jalur jaringan yang terhubung pada router tersebut.

Cara kerja router :

1. Pada komputer pengirim, data pengalami enkapsulasi (pembungkusan) pada OSI layer. Alamat layer 3 dari pengirim dan penerima akan ditambahkan pada data.
2. Paket data akan diterima oleh semua alat yang terhubung. Hanya router yang akan memproses data lebih lanjut.
3. Router menerima paket yang ditujukan untuk MAC addressnya dan membuka (dekapsulasi) data tersebut.
4. Router membaca IP address tujuan subnet mask yang dimilikinya untuk mendapatkan network address tujuan.
5. Data dienkapsulasi dan dikirim melalui interface serial.
6. Paket data diterima dan dibongkar oleh router tujuan.
7. Router membaca alamat tujuan pengiriman kemudian menentukan network address tujuan.
8. Paket data dienkapsulasi dan dikirim ke jaringan.
9. Komputer penerima kemudian membongkar paket data dan meneruskan data ke layer OSI teratas untuk ditampilkan kepada user.

Istilah :

router> : user mode

router# : Privileged/Execution mode

router(config)# : Global mode

router>? : help

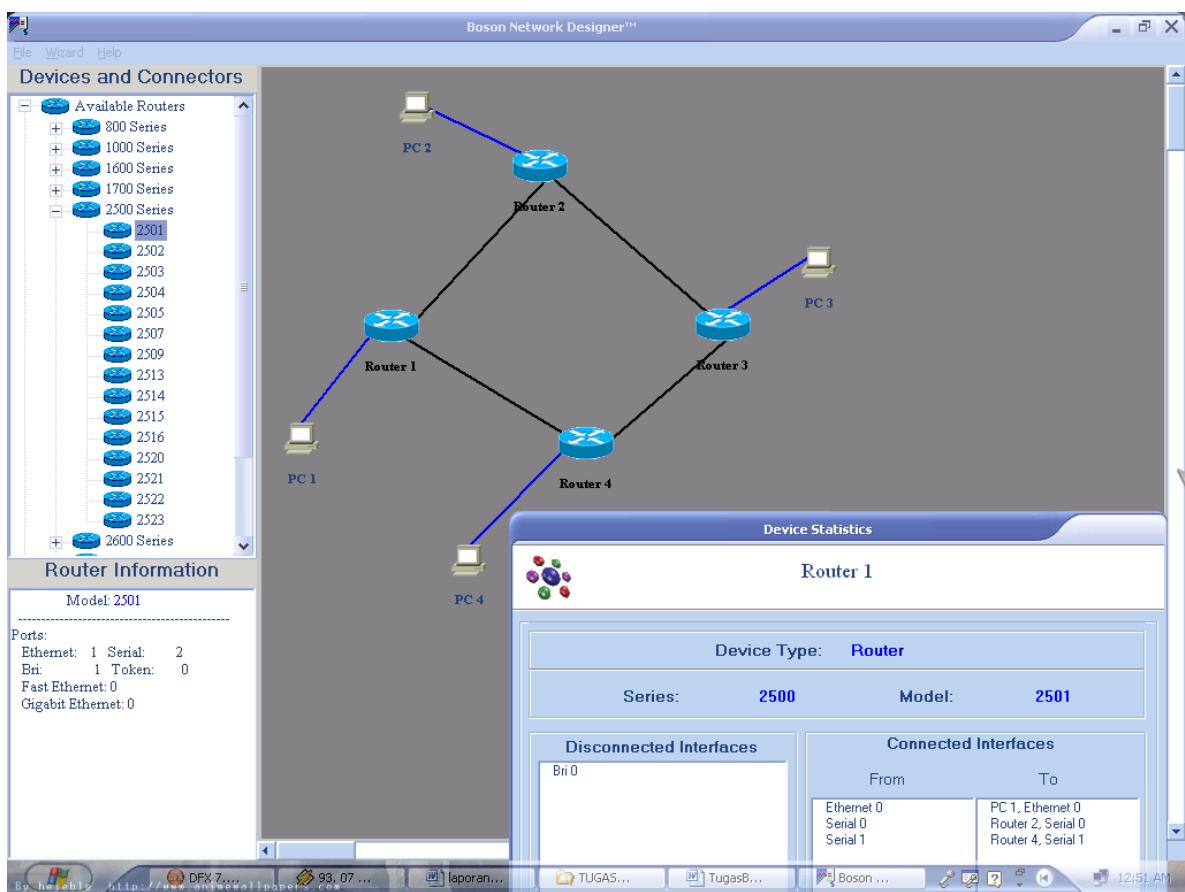

no shutdown : untuk mengaktifkan Ethernet

1. Membuat topologi jaringan.

Topologi ini menggunakan model Token ring. Dengan menggunakan 4 unit router, dan 4 unit PC sebagai contoh gambaran jaringannya.

Dengan ketentuan sebagai berikut :

1. Router model 2501 yang mempunyai 1 ethernet dan 2 serial.
2. Setiap jaringan memiliki 1 buah router dan 1 buah PC.
3. Setiap router terhubung dengan router lain melalui serial.

Router 1

- Ethernet 0 terhubung ke jaringan internal dengan IP 172.16.0.1
- Serial 0 terhubung ke router 2 dengan IP 172.15.0.1
- Serial 1 terhubung ke router 4 dengan IP 172.14.0.1

Router 2

- Ethernet 0 terhubung ke jaringan internal dengan IP 172.17.0.1
- Serial 0 terhubung ke router 1 dengan IP 172.15.0.2
- Serial 1 terhubung ke router 3 dengan IP 172.14.0.2

Router 3

- Ethernet 0 terhubung ke jaringan internal dengan IP 172.18.0.1
- Serial 0 terhubung ke router 4 dengan IP 172.15.0.3
- Serial 1 terhubung ke router 2 dengan IP 172.14.0.3

Router 4

- Ethernet 0 terhubung ke jaringan internal dengan IP 172.19.0.1
- Serial 0 terhubung ke router 3 dengan IP 172.15.0.4
- Serial 1 terhubung ke router 1 dengan IP 172.14.0.4

PC 1 dengan IP 172.16.0.2

PC 2 dengan IP 172.17.0.2

PC 3 dengan IP 172.18.0.2

PC 4 dengan IP 172.19.0.2

2. Konfigurasi jaringan.

Setting router 1 :

Router>en

Router#conf t

Router(config)#hostname first

First(config)#int eth 0

```
First(config-if)#ip address 172.16.0.1 255.255.0.0
```

```
First(config-if)#no shutdown
```

```
First(config-if)#exit
```

```
First(config)#int s0
```

```
First(config-if)#ip address 172.15.0.1 255.255.0.0
```

```
First(config-if)#clock rate 56000
```

```
First(config-if)#no shutdown
```

```
First(config-if)#exit
```

```
First(config)#int s1
```

```
First(config-if)#ip address 172.14.0.1 255.255.0.0
```

```
First(config-if)#clock rate 56000
```

```
First(config-if)#no shutdown
```

```
First(config-if)#exit
```

```
First(config)#router rip
```

```
First(config-router)#network 172.14.0.0
```

```
First(config-router)#network 172.15.0.0
```

```
First(config-router)#network 172.16.0.0
```

```
First(config-router)#network 172.17.0.0
```

```
First(config-router)#network 172.18.0.0
```

```
First(config-router)#network 172.19.0.0
```

Seperti terlihat pada gambar berikut :

Boson NetSim™ v 5.31 -- Control Panel - [second]

File Modes Devices Tools Ordering Language Window Help

eRouters eSwitches eStations Lab Navigator NetMap Remote Control

```
Router>en
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname second
second(config)#int eth 0
second(config-if)#ip address 172.17.0.1 255.255.0.0
second(config-if)#no shutdown
%LINK-3-UPDOWN: Interface Ethernet0, changed state to up
second(config-if)#exit
second(config)#int s0
second(config-if)#ip address 172.15.0.2 255.255.0.0
second(config-if)#no shutdown
%LINK-3-UPDOWN: Interface Serial0, changed state to up
second(config-if)#exit
second(config)#int s1
second(config-if)#ip address 172.14.0.2 255.255.0.0
second(config-if)#clock rate 56000
second(config-if)#no shutdown
%LINK-3-UPDOWN: Interface Serial1, changed state to up
second(config-if)#exit
%LINK-3-UPDOWN: Interface Serial1, changed state to down
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial1, changed state to down
second(config)#int s0
second(config-if)#ip address 172.15.0.2 255.255.0.0
second(config-if)#clock rate 56000
second(config-if)#no shutdown
second(config-if)#exit
%LINK-3-UPDOWN: Interface Serial1, changed state to up
%LINEPROTO-5-UPDOWN: Line protocol on Interface Serial1, changed state to up
second(config)#
second(config)#router rip
second(config-router)#network 172.17.0.0
second(config-router)#network 172.15.0.0
second(config-router)#network 172.14.0.0
second(config-router)#network 172.16.0.0
second(config-router)#network 172.18.0.0
second(config-router)#network 172.19.0.0
second(config-router)#
second(config-router)#

```

Setting router 2 :

Router>en

Router#conf t

Router(config)#hostname second

Second(config)#int eth 0

Second(config-if)#ip address 172.17.0.1 255.255.0.0

Second(config-if)#no shutdown

Second(config-if)#exit

Second(config)#int s0

```
Second(config-if)# ip address 172.15.0.2 255.255.0.0
```

```
Second(config-if)#clock rate 56000
Second(config-if)#no shutdown
Second(config-if)#exit
Second(config)#int s1
Second(config-if)# ip address 172.14.0.2 255.255.0.0
Second(config-if)#clock rate 56000
Second(config-if)#no shutdown
Second(config-if)#exit
Second(config)#router rip
Second(config-router)#network 172.14.0.0
Second(config-router)#network 172.15.0.0
Second(config-router)#network 172.16.0.0
Second(config-router)#network 172.17.0.0
Second(config-router)#network 172.18.0.0
Second(config-router)#network 172.19.0.0
```

Setting router 3 :

```
Router>en
Router#conf t
Router(config)#hostname third
third(config)#int eth 0
third(config-if)#ip address 172.18.0.1 255.255.0.0
third(config-if)#no shutdown
```

```
third(config-if)#exit

third(config)#int s0

third(config-if)# ip address 172.15.0.3 255.255.0.0

third(config-if)#clock rate 56000

third(config-if)#no shutdown

third(config-if)#exit

third(config)#int s1

third(config-if)# ip address 172.14.0.3 255.255.0.0

third(config-if)#clock rate 56000

third(config-if)#no shutdown

third(config-if)#exit

third(config)#router rip

third(config-router)#network 172.14.0.0

third(config-router)#network 172.15.0.0

third(config-router)#network 172.16.0.0

third(config-router)#network 172.17.0.0

third(config-router)#network 172.18.0.0

third(config-router)#network 172.19.0.0
```

Setting router 4 :

```
Router>en
Router#conf t
Router(config)#hostname fourth
fourth(config)#int eth 0
fourth(config-if)#ip address 172.19.0.1 255.255.0.0
fourth(config-if)#no shutdown
fourth(config-if)#exit
fourth(config)#int s0
fourth(config-if)# ip address 172.15.0.4 255.255.0.0
fourth(config-if)#clock rate 56000
fourth(config-if)#no shutdown
fourth(config-if)#exit
fourth(config-if)# ip address 172.14.0.4 255.255.0.0
fourth(config-if)#clock rate 56000
fourth(config-if)#no shutdown
fourth(config-if)#exit
fourth(config)#router rip
fourth(config-router)#network 172.14.0.0
fourth(config-router)#network 172.15.0.0
fourth(config-router)#network 172.16.0.0
fourth(config-router)#network 172.17.0.0
```

```
fourth(config-router)#network 172.18.0.0
```

```
fourth(config-router)#network 172.19.0.0
```

Setting PC 1 :

```
C:>winipcfg
```

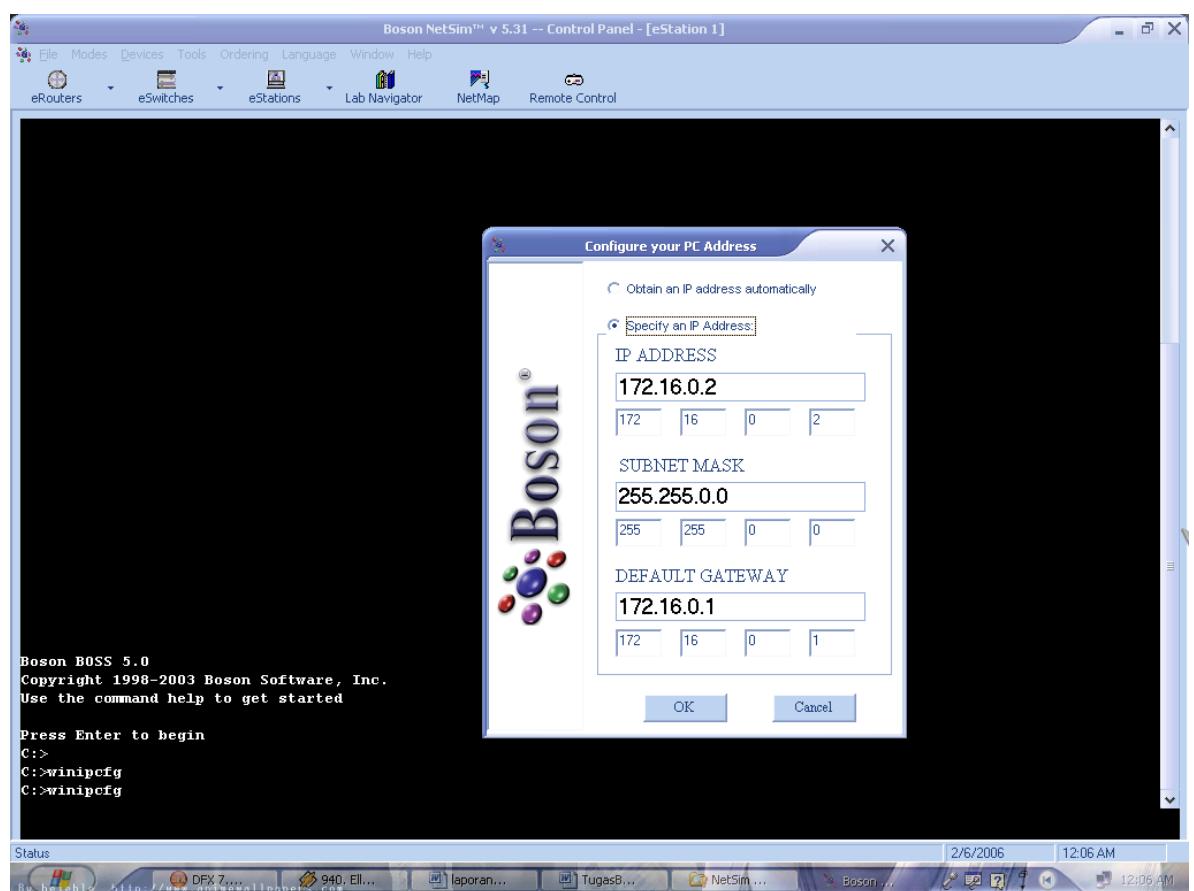

Masukkan IP,subnet mask, dan gateway :

IP ADDRESS : 172.16.0.2

SUBNET MASK : 255.255.0.0

DEFAULT GATEWAY : 172.16.0.1

Seperti gambar berikut :

Setting PC 2 :

C:>winipcfg

Masukkan IP,subnet mask, dan gateway :

IP ADDRESS : 172.17.0.2

SUBNET MASK : 255.255.0.0

DEFAULT GATEWAY : 172.17.0.1

Setting PC 3 :

C:>winipcfg

Masukkan IP,subnet mask, dan gateway :

IP ADDRESS : 172.18.0.2

SUBNET MASK : 255.255.0.0

DEFAULT GATEWAY : 172.18.0.1

Setting PC 4 :

C:>winipcfg

Masukkan IP,subnet mask, dan gateway :

IP ADDRESS : 172.19.0.2

SUBNET MASK : 255.255.0.0

DEFAULT GATEWAY : 172.19.0.1

3. Ping

Terakhir adalah meng-ping ip dari komputer yang satu ke komputer yang lain.

Contohnya pada PC 1 :

C:>ping 172.17.0.2

C:>ping 172.18.0.2

C:>ping 172.19.0.2

Maka akan muncul tampilan :

The screenshot shows the Boson NetSim v 5.31 Control Panel window titled 'eStation 1'. The menu bar includes File, Modes, Devices, Tools, Ordering, Language, Window, Help, eRouters, eSwitches, eStations, Lab Navigator, NetMap, and Remote Control. The main area displays the terminal output of three ping commands:

```
C:>ping 172.17.0.2
Pinging 172.17.0.2 with 32 bytes of data:
Reply from 172.17.0.2: bytes=32 time=60ms TTL=241

Ping statistics for 172.17.0.2:    Packets: Sent = 5, Received = 5, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 50ms, Maximum = 60ms, Average = 55ms

C:>ping 172.18.0.2
Pinging 172.18.0.2 with 32 bytes of data:
Reply from 172.18.0.2: bytes=32 time=60ms TTL=241

Ping statistics for 172.18.0.2:    Packets: Sent = 5, Received = 5, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 50ms, Maximum = 60ms, Average = 55ms

C:>ping 172.19.0.2
Pinging 172.19.0.2 with 32 bytes of data:
Reply from 172.19.0.2: bytes=32 time=60ms TTL=241

Ping statistics for 172.19.0.2:    Packets: Sent = 5, Received = 5, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 50ms, Maximum = 60ms, Average = 55ms
C:>
```

The status bar at the bottom shows 'Status' and the date/time '1/31/2006 10:22 AM'.

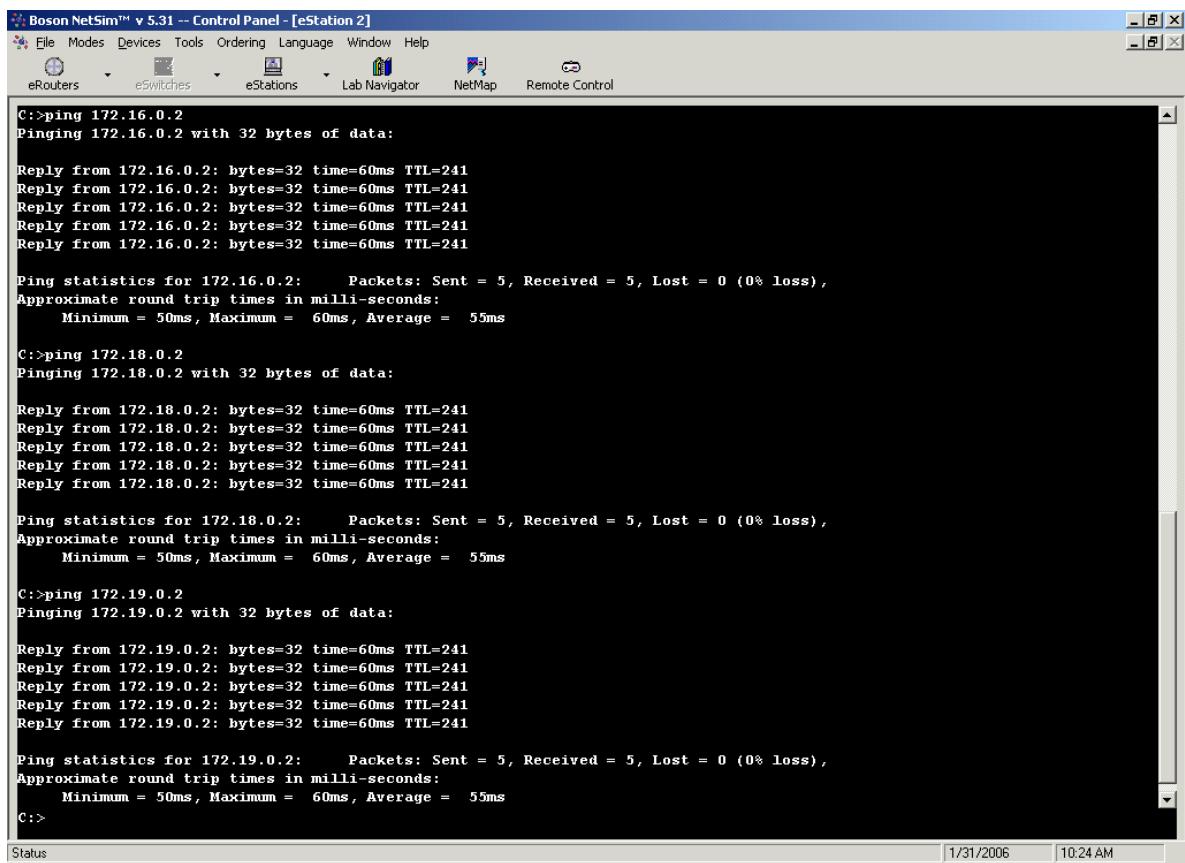

Pada PC 2 :

C:>ping 172.16.0.2

C:>ping 172.18.0.2

C:>ping 172.19.0.2

Maka akan muncul tampilan :

The screenshot shows the Boson NetSim™ v 5.31 Control Panel window titled "eStation 2". The menu bar includes File, Modes, Devices, Tools, Ordering, Language, Window, Help, and a toolbar with icons for eRouters, eSwitches, eStations, Lab Navigator, NetMap, and Remote Control. The main window displays terminal output for three ping commands:

```
C:>ping 172.16.0.2
Pinging 172.16.0.2 with 32 bytes of data:

Reply from 172.16.0.2: bytes=32 time=60ms TTL=241

Ping statistics for 172.16.0.2:    Packets: Sent = 5, Received = 5, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 50ms, Maximum = 60ms, Average = 55ms

C:>ping 172.18.0.2
Pinging 172.18.0.2 with 32 bytes of data:

Reply from 172.18.0.2: bytes=32 time=60ms TTL=241

Ping statistics for 172.18.0.2:    Packets: Sent = 5, Received = 5, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 50ms, Maximum = 60ms, Average = 55ms

C:>ping 172.19.0.2
Pinging 172.19.0.2 with 32 bytes of data:

Reply from 172.19.0.2: bytes=32 time=60ms TTL=241

Ping statistics for 172.19.0.2:    Packets: Sent = 5, Received = 5, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 50ms, Maximum = 60ms, Average = 55ms
C:>
```

The status bar at the bottom shows "Status" and the date/time "1/31/2006 | 10:24 AM".

Dan seterusnya sampai semua komputer berhasil meng-ping semua device.

Penulis : Muhamad Husni Lafif

Email : muhamadhusnilafif@yahoo.com atau lanthing.25@gmail.com

Riwayat Hidup : saya anak pertama lahir di kebumen pada tanggal 20 Oktober 1990 tahun 2006 lulus SMP 06 kebumen dan melanjutkan di SMK telkom shandy putra purwokerto mengambil jurusan jaringan komputer, pada tahun 2009 melanjutkan D4 Telekomunikasi di Politeknik Negeri Semarang sampai sekarang.
