About Open Academic Journals Index

Open Academic Journals Index (OAJI) is a full-text database of open-access scientific journals.

Our mission lies in putting together an international platform for indexing open-access scientific journals. In a short-term perspective, we are considering calculating the journal Impact Factor. When it comes to calculating the impact factor, of great significance is how full the archive has gotten over the previous two years. For instance, the Impact Factor for 2012 is calculated based on the indicators for 2012—2013.

The maximum value of the impact-factor is 1.000
Impact-factor OAJI 2012 is calculated, including the following factors:
— 15 % is the fullness of the upload of the issues archive of 2012—2013 onto OAJI platform

2. Akan tampil hasil pencarian berdasarkan kata kunci.

Penelitian Kesehatan seperti diperlihatkan pada gambar di bawah ini.

- Bagian Published by menunjukkan institusi yang menerbitkan jurnal tersebut.
- Bagian Year publication menunjukkan tahun pertama kali jurnal ini terbit.
- Bagian Frequency menunjukkan frekuensi terbit dalam satu tahun.
- Bagian Impact Factor OAJI 2012 menunjukkan nilai dampak berdasarkan perhitungan OAJI
- Bagian Abbreviation menunjukkan singkatan jurnal.
- Bagian Country menunjukkan negara asal jurnal tersebut.
- Bagian ISSN (print) dan ISSN (online) menunjukkan nomor ISSN cetak dan online dari jurnal yang bersangkutan.
- Bagian Journal Website menunjukkan alamat situs dari jurnal tersebut.
- Bagian Editor in Chief menunjukkan ketua editor tersebut.
- Bagian ISI, Scopus, dan DOAJ menunjukkan apakah jurnal tersebut telah terindeks di ISI, Scopus dan DOAJ.
- Bagian All articles dan All issues menunjukkan jumlah nomor terbitan dan jumlah artikel yang telah diunggah ke OAJI.
- Bagian Full text language menunjukkan bahasa yang digunakan oleh jurnal ini.
- Bagian Journal discipline menunjukkan disiplin ilmu yang digunakan oleh jurnal ini.
- Bagian Journal description menunjukkan gambaran singkat dari jurnal ini.
- Bagian Journal is indexed by menunjukkan situs pengindeks yang telah mengindeks jurnal ini.

Abstract Abstract Acne vulgaris is a common human skin disease and commonly was treatment by antiacne formula with antibiotics substances as active compounds. As alternative formula for treatment acne vulgaris and decrease of antibiotics resistance effect, the new formula antiacne with chitosan/Garcinia mangostana-Centella asiatica extracts nanoparticles as active compound has been developed. For the evaluation of formula quality, the stability testing of antiacne formula with active substance chitosan/G. mangostana-C. asiatica extracts nanoparticles after storage at room temperature for 24 weeks and 40oC/75% RH for 12 weeks have been examined. The stability testing was evaluated including therapeutical, physical, chemical and microbiologicaltests. The therapeutical test of samples was observed by inhibition growth of Propionicbacterium acnes while the physical test was observed by organoleptic parameters such as stability of gel, color, odor,
